

Oficina: Make a Game

Construct 2

É um editor de jogos 2D baseado em HTML5, desenvolvido pela Scirra Ltda.

- permite criar jogos baseados na web sem grandes conhecimentos em linguagens de programação.
- permite a criação por meio do estilo drag-and-drop usando um editor visual e um sistema de lógica baseada em comportamento.
- oferece uma série de ferramentas para montar os mais variados tipos de jogos, que funcionem inteiramente integrados ao HTML5, e também usa o Python como linguagem de script para complementar os jogos.
- interface simples
- e é um programa bem leve.

- Um jogo possui um ou vários Layouts (níveis)
- Um nível é constituído por várias Layers (camadas)
 - Background
 - Objetos de cenário (interativos)
 - Personagem
 - GUI
- Uma Layer pode conter um ou vários sprites
- Um Sprite poderá conter um ou vários Behaviours (Comportamentos)

Alguns sites disponibilizam “sprites” gratuitos que podem ser utilizados nos jogos

- <https://openclipart.org>
- <http://kenney.nl/assets>
- <http://opengameart.org/>
- <https://itch.io/game-assets/free/>

Sons gratuitos também podem ser encontrados

- <http://incompetech.com/music/royalty-free/music.html>
- <http://www.animal-sounds.org/air-animal-sounds.html>
- <http://dig.ccmixer.org/>

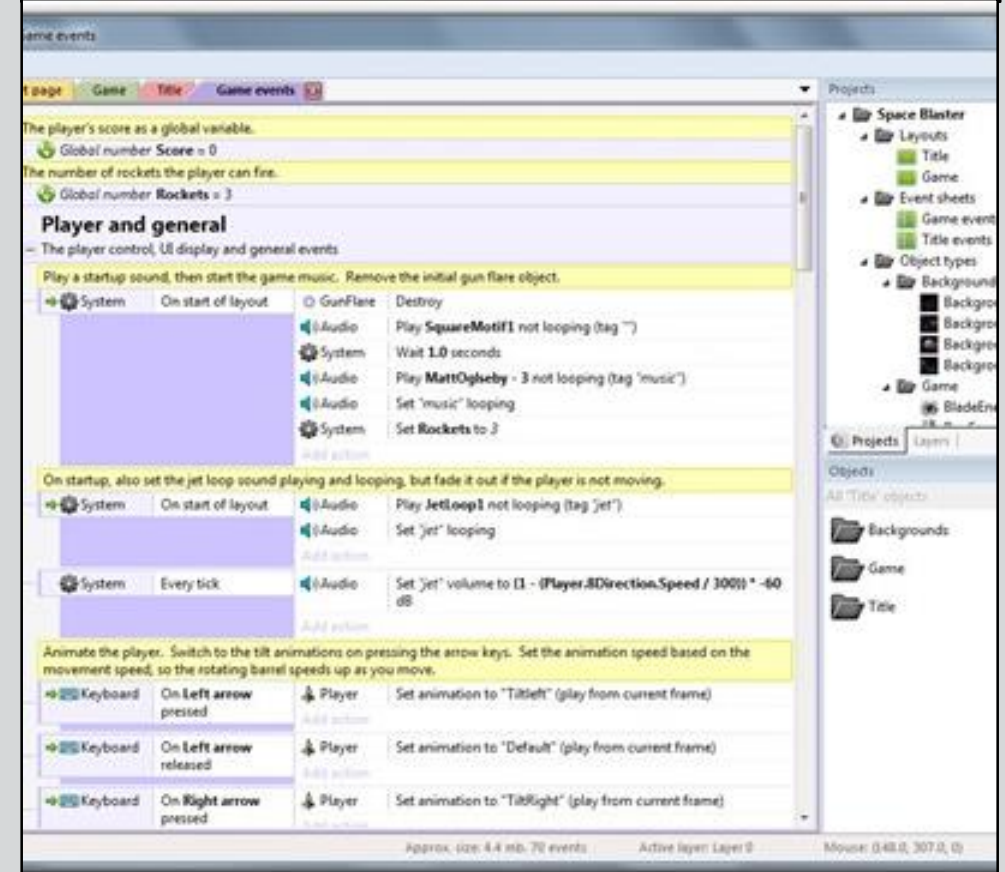

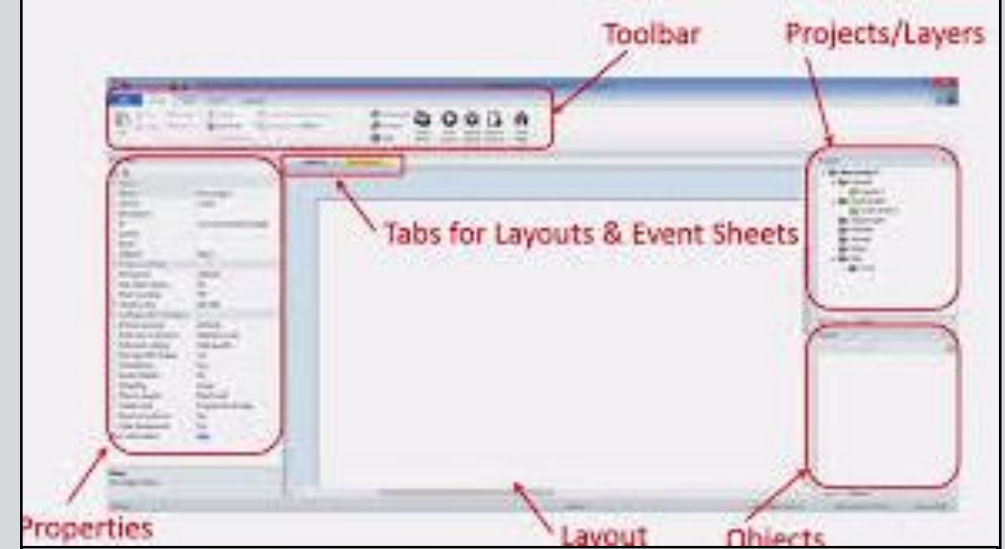

Por onde começar?

Ambiente de trabalho

O ecrã encontra-se dividida em dois setores:

- layout - é essencialmente visual: ali, podes adicionar os personagens e fazer pequenas alterações neles.
- Ações - podes adicionar a resposta a um comportamento, que será realizada quando houver qualquer interação com o item em questão (ou seja, como o programa deve se comportar quando a pessoa clicar em um elemento ou dois personagens se aproximarem, etc...).
- A parte de eventos apresenta comandos, ciclos, instâncias, condições, contadores, entre outros.

Construção de um jogo de plataformas

Select template or example

Select a template to start with or an example to open:

New retro style project

Create a platform-neutral project with settings and objects suited to retro style games (such as pixellated rather than smooth scaling).

New empty SD landscape 4:3 project

Create a new empty project with a standard definition 4:3 landscape screen.

New empty SD portrait 4:3 project

Create a new empty project with a standard definition 4:3 portrait screen.

New empty SD landscape 16:9 project

Create a new empty project with a standard definition 16:9 landscape screen.

New empty SD portrait 16:9 project

Create a new empty project with a standard definition 16:9 portrait screen.

New empty HD landscape 720p project

Create a new empty project with a high definition 720p (16:9) landscape screen.

Event sheet 1 x

To start adding events, right-click, double click, or click on an object.
 Events are run from top to bottom once per tick (i.e. once per frame).
 Right-click and select 'Help' for more information.

Add event

Double-click an object to create a condition from:

System bunny1_stand fundogame... ground_san...

Add event

Triggered when first hitting the floor.

- Is jumping
- Is on floor

Platform: Animation triggers

- On fall
- On landed
- On stopped

Size & Position

- Compare height

Add action

Double-click an object to create an action from:

- System
- bunny1_stand
- fundogame...
- ground_san...

Time

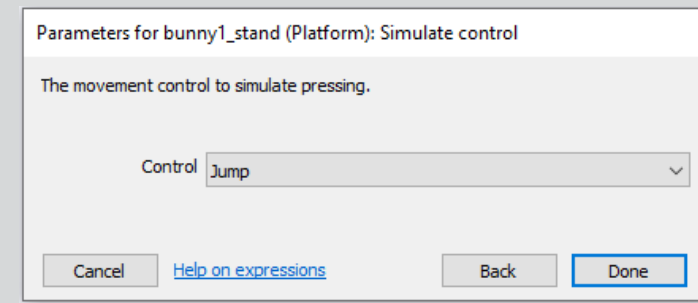

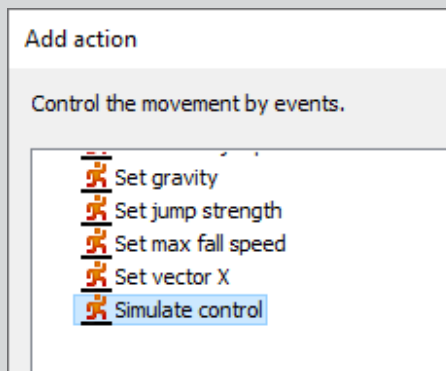

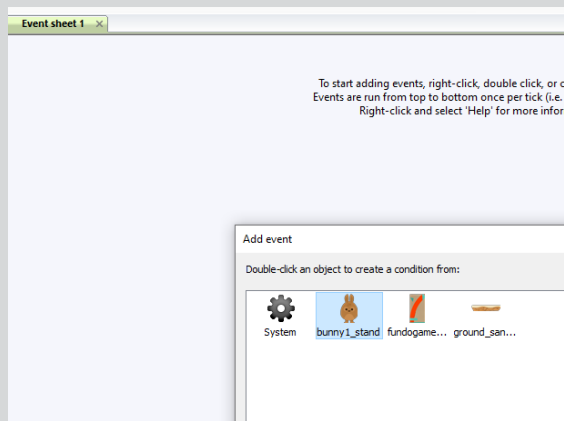

- Restore object time scale
- Set object time scale
- Signal
- Wait for signal
- Set minimum framerate
- Set time scale
- Wait

Parameters for System: Wait

The number of seconds to wait before running the next action.

Seconds

Outro desafio – Jogo de plataformas

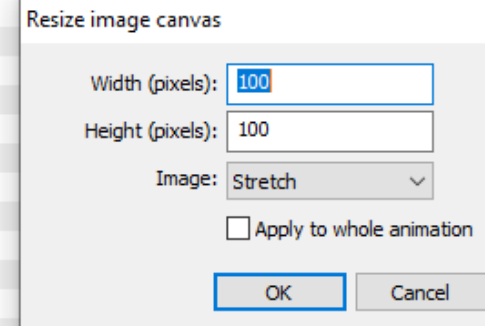

Vamos praticar

- Vamos adicionar um plano de fundo ao nosso projeto.
- Clique duas vezes em cima qualquer parte da janela do centro.
- Selecione inicialmente o objeto "Tiled Background".

Vamos praticar

- Clique em qualquer ponto da tela branca.
- Crie um plano de fundo
- Verifique que tem o tamanho 100*100 para isso passe o rato por cima dos ícones e localize o ícone denominado "Resize".
- Feche o editor.

Vamos praticar

- Ao redimensionar o plano de fundo é replicado

Diferença entre solid e jump-thru

- Solid

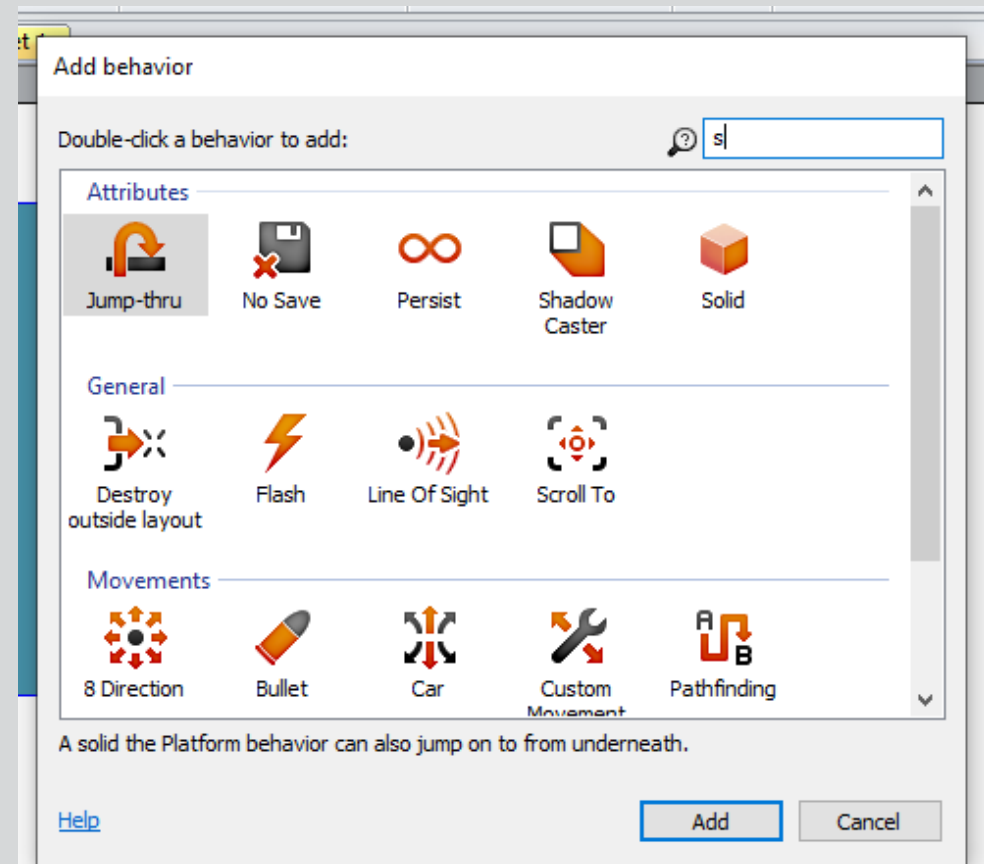

- Jump-Thru

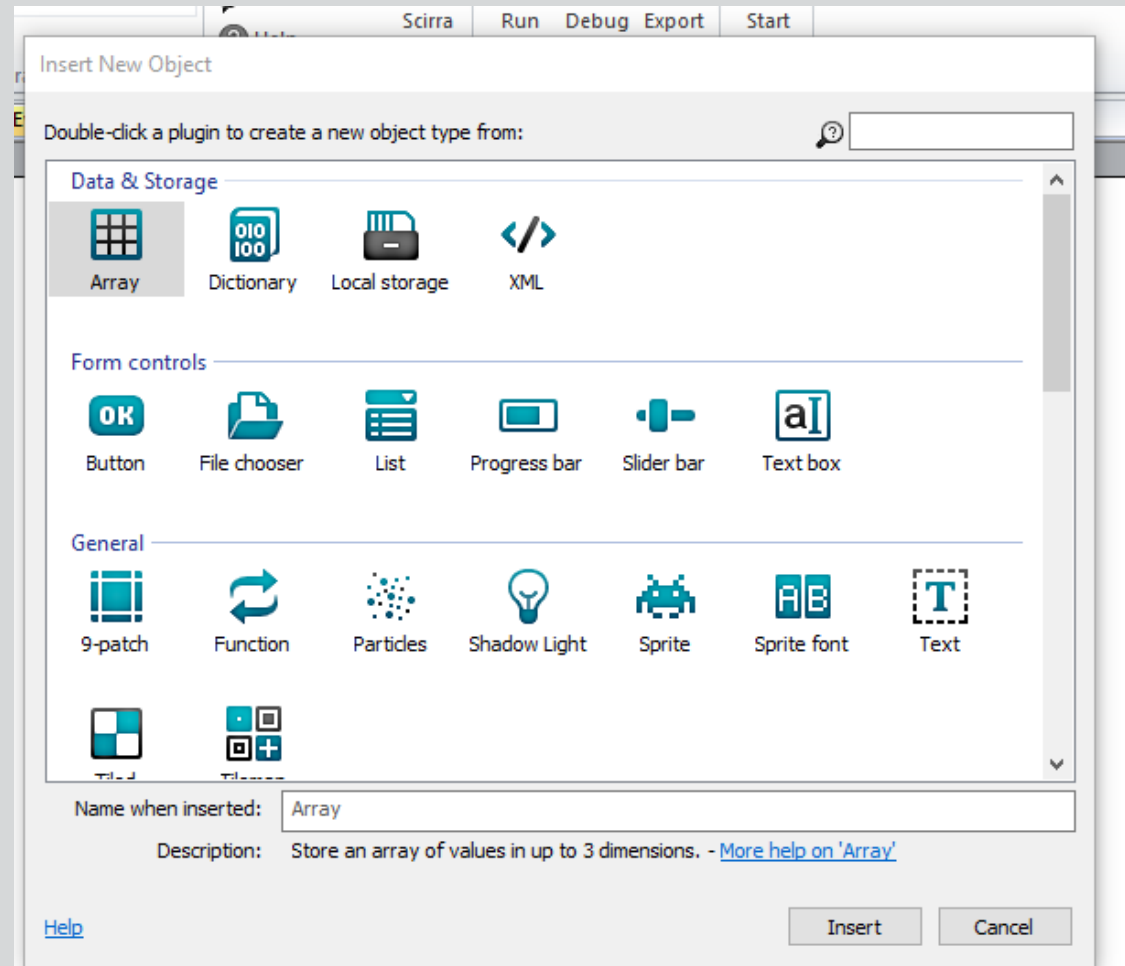

Vamos praticar

- Para que o personagem não caia da plataforma ela tem que ser solida.
- Selecciona o plano de fundo e adiciona o behavior solid

Vamos praticar

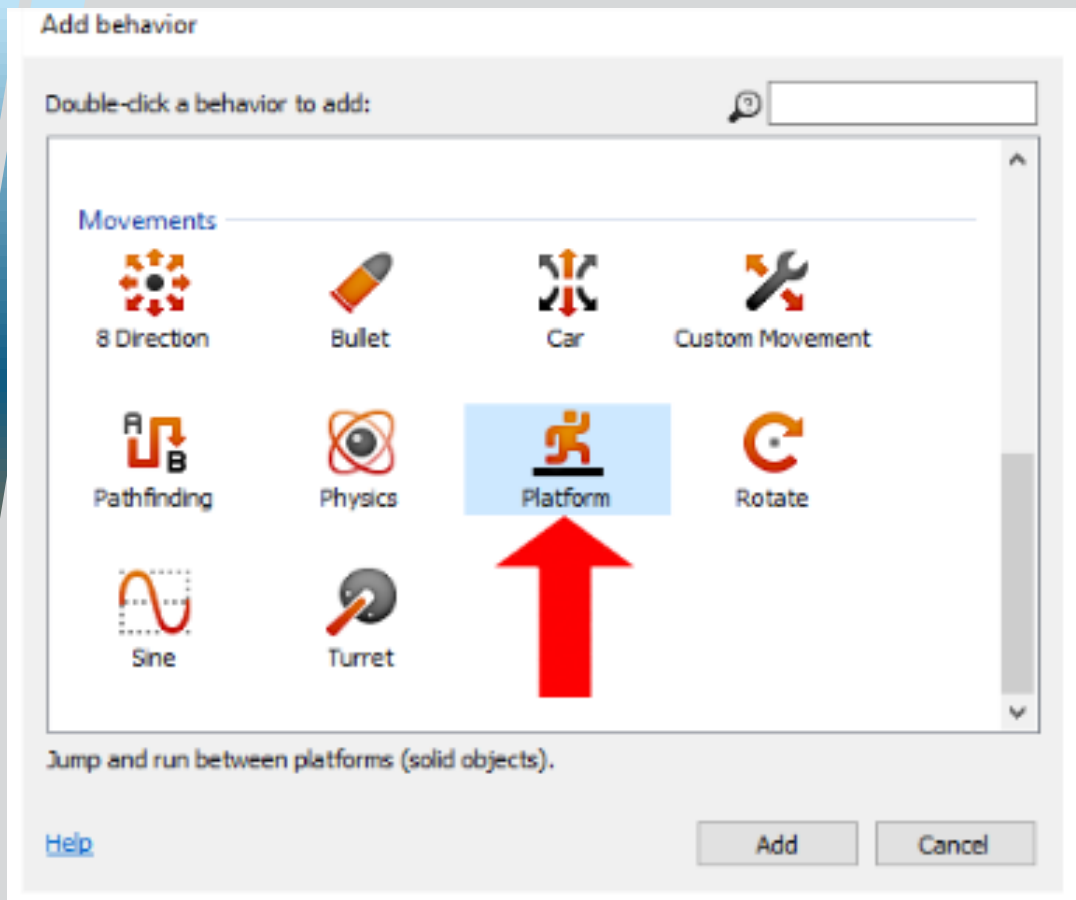

- Vamos criar o nosso personagem.
 - Clic direito
 - Insert new object
 - Sprite
 - Inserte
 - Clique no ecrã para inserir o sprite

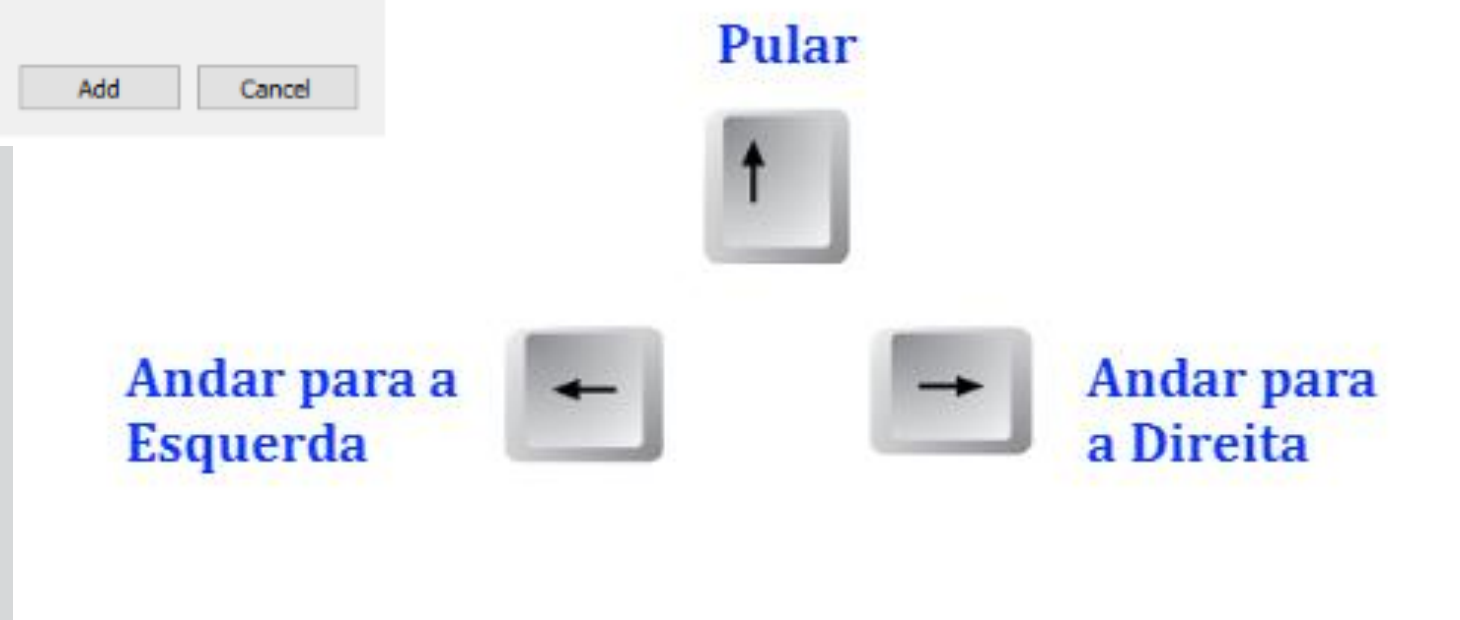

Vamos praticar

- Desenha o personagem e pinta da cor que desejares
- Determina os pontos de colisão
- Altera o nome para jogador (não coloques espaços nem acentuação)

nstruct

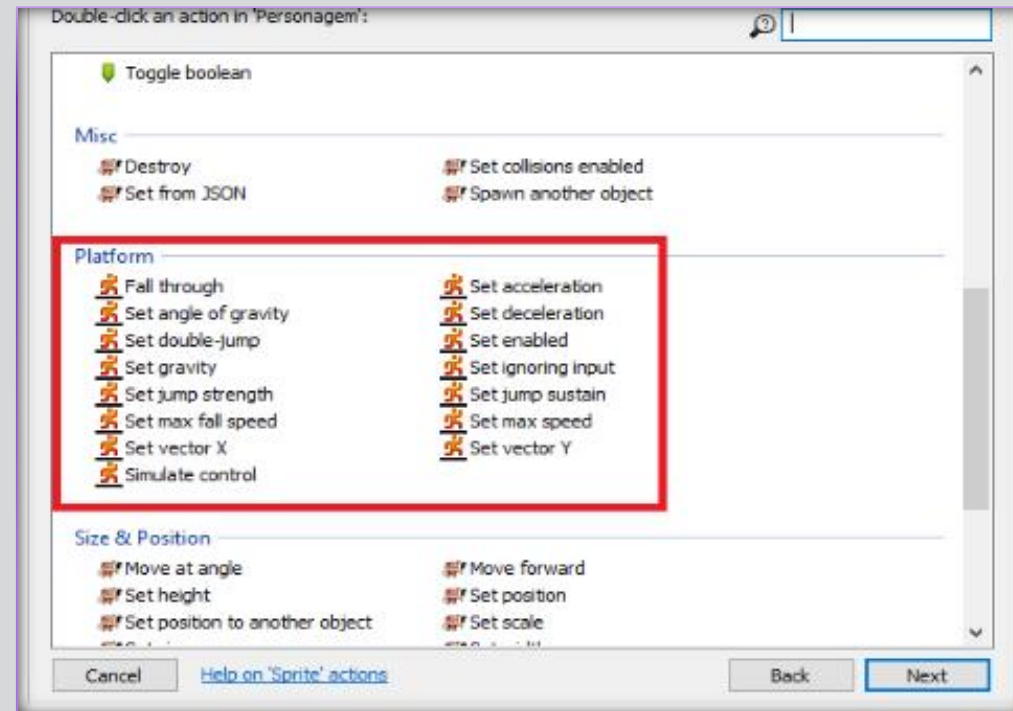

Propriedades

- À Esquerda por baixo de "behaviours" aparece uma nova janela com as propriedades

Acceleration	800
Deceleration	350
Jump strength	350
Gravity	1200
Max fall speed	800
Double jump	Enabled
Jump sustain	0
Default contr...	Yes
Initial state	Enabled

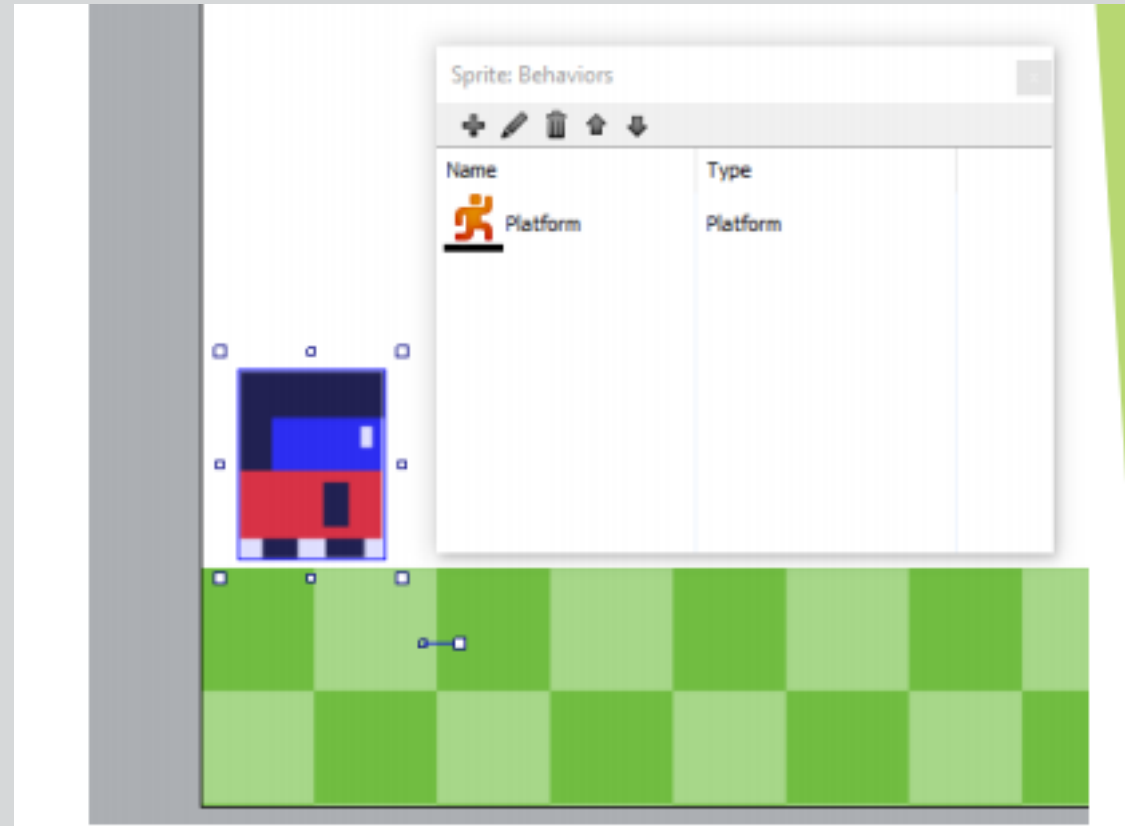

Ações

- É programando as ações que defenimos o comportamento dos nossos personagens.

Vamos praticar

- adiciona o comportamento de Platform.
- Executa o seu projeto e vê se o personagem é capaz de andar para ambos os lados e pular.

Agora vamos criar mais alguns objetos do tipo Solid, para serem plataformas do nosso jogo.

Vamos praticar

- Adicione mais uma Sprite no jogo e desenhe as plataformas desejadas.
- Adicione o comportamento de Solid também a esse objeto.
- Mantenha a tecla Ctrl pressionada e replique esse objeto pelo ecrã.
- Execute o seu jogo e veja que o personagem consegue escalar pelos objetos.

objetivo

Temos

	Unbounded scrol...	No
+	Layout Size	1640,480
+	Margins	500, 500
-	Effects	

do jogo

para 1640 por 480

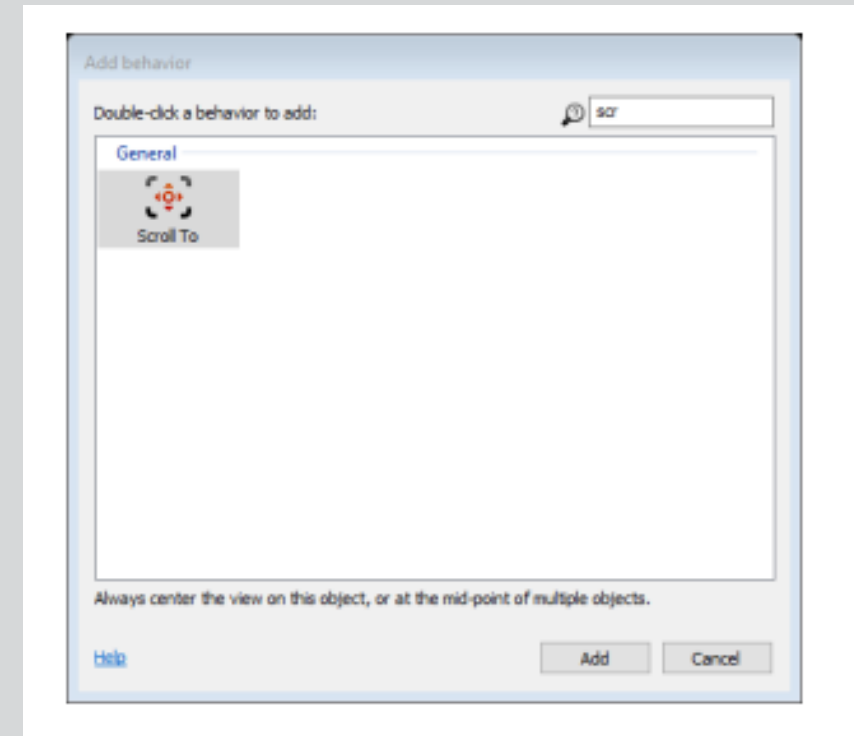

Temos que expandir também o plano de fundo

Execute o seu jogo e vê que o personagem sai do ecrã

Camara acompanha a personagem

- O personagem consegue andar pelo cenário, mas a camara não o acompanha.
- Para que isso aconteça, adicione ao seu personagem o comportamento de Scroll To

Adicione mais elementos do tipo Solid ao seu jogo, com o objetivo de agregar dificuldade.

Adicione um elemento para indicar o fim do nível, quando o personagem o atingir.

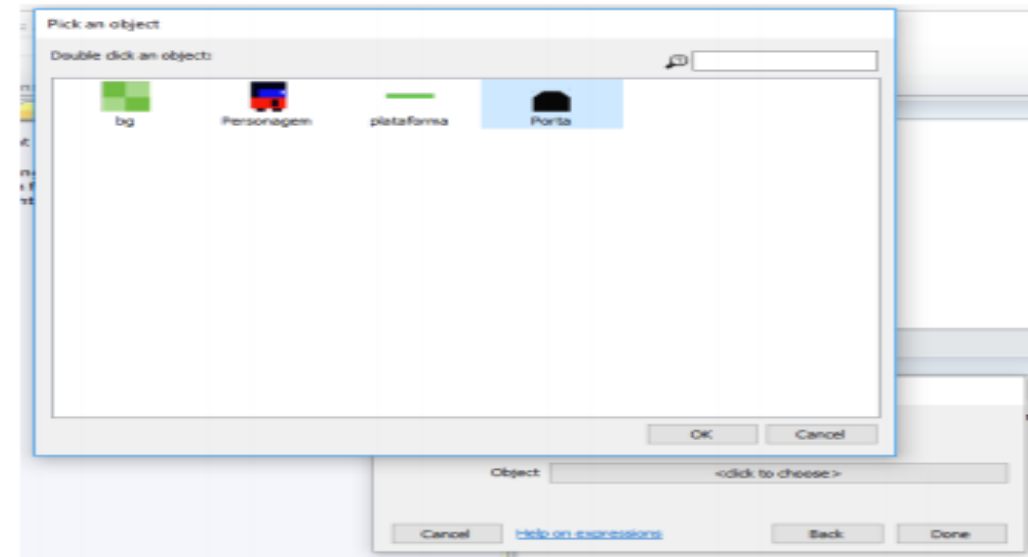

Novo nível

- Para criar um novo nível, devemos adicionar um novo layout ao nosso projeto.
- Como será parecido com a primeiro, vamos duplicar o Layout existente.
 - Para isso, clique com o botão direito sobre o layout, e selecione a opção Duplicate.
 - Renomei os Layouts para nivel_1 e nivel_2.

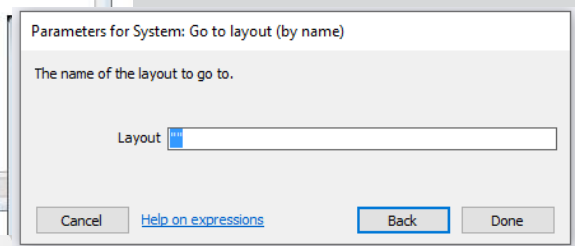

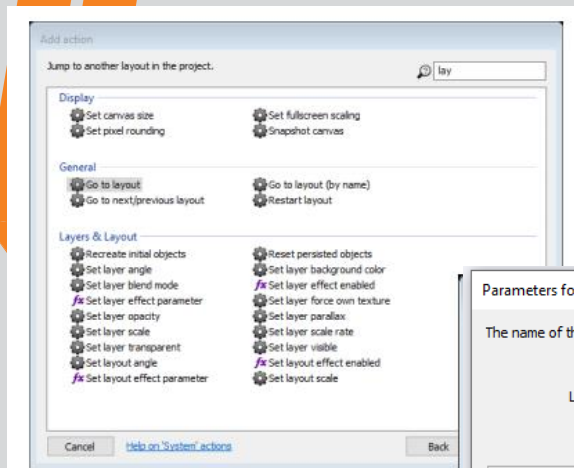

Mudar de nível

- No Layout do nível 1. vamos adicionar um evento para que o personagem ao atingir a porta passe para a fase seguinte.
- Altere o nome da event sheet 1 para nivel_1_eventos, de forma a facilitar a organização.
- Vamos adicionar um novo evento, tendo como base o objeto do Personagem.

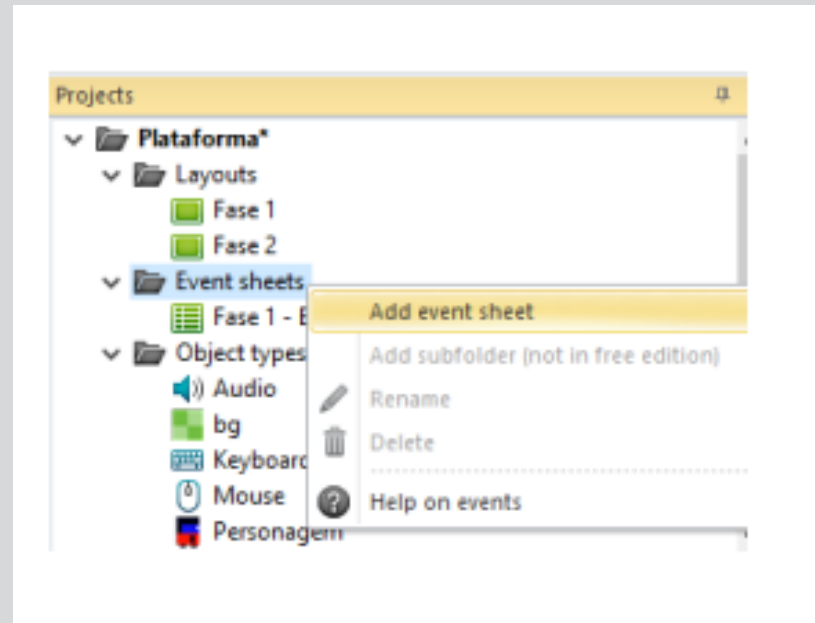

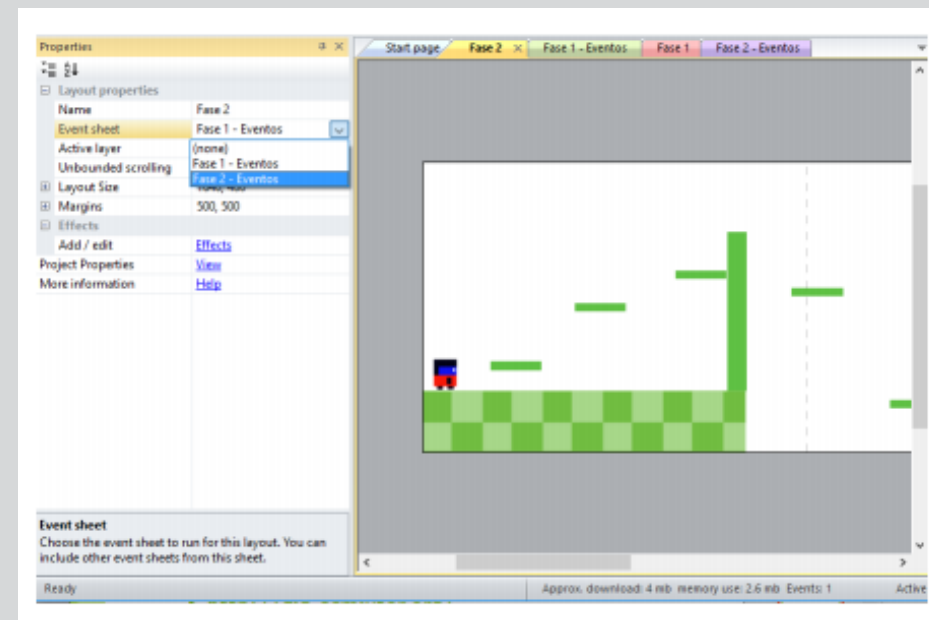

- Selecione o evento "On colision with another object" e selecione o objeto da Porta.
- Na ação, selecione o elemento System
- Na opção General, selecione a opção "Go to Layout". E escolha o Layout nivel_2.

- Crie uma nova event sheet para o nível 2 e dalhe o nome nivel_2_Eventos

- Associe-a ao Layout do nível 2

- Modifique o layout, aumentando a dificuldade, caracterizando a nova fase.
- Adicione inimigos
- Adicione armas

Adicionar inimigos

- Crie uma nova Sprite para representar seu inimigo no jogo.
- Adicione uma ação para que, quando o Personagem colidir com o inimigo, o Personagem seja destruído
 - Add Event ? Personagem ? On collision with another object ? inimigo
 - Add action ? Personagem ? Destroy.
- Adicione outra ação para que o jogo volte para o início do nível após a destruição do personagem. ?Add action ? System ? Go to

Layout ? nivel_2

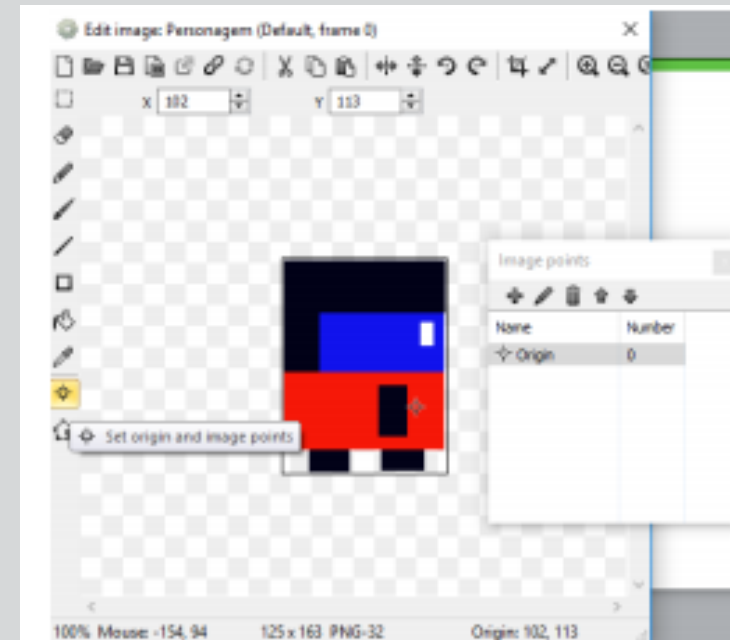

Adicione arma ao personagem

A personagem terá uma "arma" para poder destruir o inimigo.

- Adicione um novo Sprite para ser a "bala" a ser disparada pelo personagem.
- À bala, adicione o comportamento (behaviour) de Bullet.
- Adicione um objeto do tipo Keyboard ao seu jogo.
- Adicione o seguinte evento e ações:
 - Add Event ? Keyboard ? On key pressed ? (e pressione a tecla espaço)
 - Add Action ? System ? Create object ? bala ? on Layer 1
 - Add Action ? Personagem ? Spawn another Object ? bala

- Ao pressionar a tecla espaço, a personagem irá disparar balas.
- Se a posição de onde as balas saem for estranha podes posicioná-las para partir do centro do objeto,
 - Para isso, abre a edição da personagem, seleciona o componente Set origin and image points, e posicione-o no centro da personagem

Destruindo o inimigo

Adicione um evento para que, quando a bala colidir com o inimigo, o inimigo seja destruído:

- Add event [?] bala [?] on collision with another object [?] inimigo
- Add action [?] inimigo [?] destroy
- [?]Add action [?] bala [?] destroy
